Dr. Carolyn Carter
1400 West Monroe
Jackson, MI 49202

Dear Dr. Carter:

I would like to take this opportunity to thank you and Dr. Mowen for bringing the Math Equation game and its progeny to the Jackson Public School System.

In an educational format disguised as a game, mathematical concepts were enthusiastically learned by elementary students which are well beyond what is normally taught to children of their age. Separate and apart from enhancing their mathematical skills, the games provided the children with opportunities to employ logic and enhance their interpersonal relationship skills.

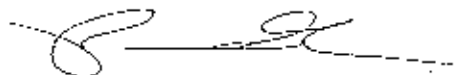

Your willingness, and that of Dr. Mowen, to utilize non-traditional teaching methods in which to educate our children should be applauded.

I would particularly like to commend your decision to utilize Mr. Brian Walker as a consultant. The extraordinary performance of our first year players, both at the state and national levels, are in my opinion a direct result of Mr. Walker's coaching.

I was in attendance at both the state and national tournaments. I had an opportunity to speak with Mr. Walker on a number of occasions. More importantly, I had an opportunity to view Mr. Walker's interactions with the children at a distance. Mr. Walker's knowledge of the equation games is a given. Additionally, his ability to successfully interact with and impart that knowledge to the children is outstanding.

I appreciate your time.

Very truly yours,

Pamela S. Kelly
